

# Assignment. Ғайғармақ / жинақ.

Dataset 1000 frame, Yolo format.

box 5 classes

polygon lane.

polyline 3 classes.

size 1280 x 720 px. RGB. ум. 50-60%  
room.

custom layer CNN. ∴ YOLO-seg, vnet.

input: Ұлғашағандың құрамы.

32x32, square aspect ratio.

aspect ratio 16:9

input Ұлғашағандың 36 x 64. pixel.

"input" = 11 / 21 x 2 RGB

input W: H: C =  $64 \times 36 \times 3$  RGB

output : binary mask. =  $64 \times 36 \times 1$  binary mask.

---

Split dataset 65 : 35 %

---

model.py → your model.  
train.py → load / augment / prepare → <sup>resize</sup> batch group.  
                    → integrate tensorboard.  
                    batchsize, epoch  $\times 30$  ++  
                    → save model. (.pt.)

○ give training loss give? → tensorboard

---

predict.py , load model.

→ load model / test 35% data.

save binary mask mmio predict to disk.

→ size  $1280 \times 720$   
/ result.

---

evaluation.py → load result.

→ load ground truth.

detection flag ( Yes/NO)     $\text{iou} \geq 0.6$  : positive

↪ positive (model vorth detect)

↪ <sup>21</sup>1924 IOV.

---
